

ppm+ Release contents v5.0.4:

Date Expected Live: Tuesday 22 Aug 2017

Contents: V5.0.4 is a hotfix release to deploy:

1. Issues have been identified with the Live service where on occasions eObs recorded are not reflected in the NEWS (National Early Warning Score) update - this is used to advise staff when the next set of observations should be taken.

Implementation Plan:

- ☐ Add admission dates to AddNews and ChangeStrategy commands.
- ☐ Update NEWS aggregate to raise the StartNews event when ChangeStrategy and AddNews commands are executing. Only if NEWS hasn't already started.
- ☐ Remove Guard.AgainstNotStarted when AddNews is executing.
- ☐ Log a warning if NEWS needed to be started when it was assumed that it already had been.
- ☐ Update the Aggregateld on the NewsStrategy read model.
- ☐ Add additional logging to the projection service.
- ☐ We need to see all events going into the cache and all events that try to be processed by the NEWS ACL projector.

The change affected the PPM+ API and Projection Service

2. Amend the ICE interop link in PPM+ to use https:// instead of http://

Included in the 5.0.4 release of ppm+ are the following:

Features:

N/a

Bug Fixes:

[CP-13269] - LIVE ISSUE: Fix NEWS aggregate when StartNews command fails to fire
