ppm+ Release contents v18.0.31:

Date Expected Live: Friday 09 March 2018

Contents: V18.0.31 is a minor release to deploy the following:

- The Gateway MPV can be filtered to enable users to focus on different types of eDID in different statuses.

- When the previous raft of changes were made to eDID (replacement of S2 and S5 types) the filter options were not fully updated in line with the changes. With further changes due in this bundle this release is to bring the filtering options back into alignment.
- Provide a single approach to filtering so there is no confusion by having different and conflicting filter options available

Features:
[CP-14618] - eDID: Filtering options on Gateway MPV
[CP-15689] - eDID: Remove 'Category' section from Gateway filters
[CP-15579] - eDID: Ability to respond to outstanding referrals for discharged patients via the Gateway MPV
[CP-15580] - eDID: Limit Gateway modal to show only referrals from current admission

Bug Fixes:

[CP-15381] - eDID - Gateway filter - Cannot filter by Screening
