

# Outpatient Clinic Prescription V3 eForm in PPM+

The PPM+ Outpatient Clinic Prescription eForm V3 is now available to all prescribers. The eForm allows prescribers to generate prescriptions on PPM+ and send them electronically to LTHT Boots or Chapel Allerton outpatient pharmacy.

This paperless process improves the outpatient experience for patients and staff alike - some examples include:

- Electronic transfer of prescription therefore Patients/clinicians/LTHT staff do not need to physically transfer prescriptions.
- Greater/easier outpatient prescription history, the eForm is and remains easily accessible on PPM+ for queries/prescribing history.
- GPs have fed back that they like the eForm as they can see exactly what has been prescribed.

This eForm is an electronic alternative to the paper outpatient prescription form. The form does not have any decision support features, such as automated allergy, interaction or dose range checking. All these checks will have to be done manually by the prescriber.

***Please note: This prescription can only be dispensed by pharmacies within the Trust and cannot be used for controlled drugs.***
